49 Witherford Way, Selly Oak, Birmingham, B29 4AY

SUMMARY

Computer science graduate from Aberystwyth university. Competent in a lot of programming languages such as Python, Java and C. Experience having to complete an assignment to a deadline whether in a team or individually.

WORK EXPERIENCE

Working as a flusher/maintenance, I did this at University Locks/50 Curzon St during the summer period of 2017 and 2018 and I did this for three months during my summer holidays.

Tennis Coach at Weoley Hill Tennis Club, I started volunteering there at the age of 14 as part of my Duke of Edinburgh award and continued there up until I left for University at the age of 18.

Volunteering at Cotteridge park, I started volunteering there at the age of 14 as part of my Duke of Edinburgh award and continued there up until I left for University.

Temporary Employment over the Christmas period at Royal Mail in the role of a Christmas Casual from the beginning to the end of December 2020.

Website builder for an individual client https://osteobeth.co.uk/ during October 2020/

EDUCATION

Graduated Computer Science at Aberystwyth University in Summer 2020 with a grade of 2:2
https://github.com/JoesThomas

MODULES COMPLETED

CS26520 Artificial Intelligence
CS34110 Computer Vision
CS31810 Computational Bioinformatics
CS32420 Computer Graphics and Games

A-Levels, June 2014 – June 2016
Kings Norton Sixth Form,

GCSE's, June 2009 – June 2014
Kings Norton Boys School,

PERSONAL INTERESTS

I have taken part in many extra-curricular activities which I feel have helped my social skills to improve. An example of this is my tennis coaching. I did this for four years voluntarily on Saturday mornings and Thursday afternoons to teach young children in years 2-5 how to play tennis and encourage them to develop their skills in order to become better players, this has helped me to analyse and improve various playing techniques in coaching.

During my time at Sixth Form I was appointed as a member of the Head boy team in year 13 and helped regularly to organise and help run various important events such as fundraisers for the benefit of the school and sixth form, such as; a Christmas jumper competition for the school, various non-uniform days and the year 13 leavers ball. This responsibility allowed me to develop my leadership skills whilst also developing my skills of how to be a member of a team and allowed me to find new challenges and how to combat them, which I have enjoyed. Throughout my lifetime I have never been late for school and my attendance is exemplary, missing very few days of school or any other engagements. I have also completed both my bronze and silver Duke of Edinburgh awards, I feel that the skills that I developed on the expedition and when volunteering are problem

solving, for example, navigating and deciding which route to take and using my communication skills which helped me aid my peers and complete the expedition with my group. I also volunteer at my local park where I help by gardening and keeping the park clean and litter free and help steward the events which go on at the park, for example community fetes and camps. This shows that I am dedicated and hardworking and enjoy working with a variety of people. I also enjoy the feeling of being part of and giving back to my local community.
Whilst I was at university, I enjoyed trying out a lot of different topics, for example I took modules in web design, computer vision and bioinformatics. I did this so that I would have a broad range of knowledge which would help me understand various approaches to computer science. My dissertation used artificial intelligence to read, analyse and compose music as I am interested in music and have been from an early age and have got my grade 7 certificate for the trombone.
I have also worked on a variety of coding projects to not only increase my own knowledge of coding languages but also to try and solve issues that I could not find solutions for. For example, one project that I worked on is a program that finds recipes depending on the ingredients that the user inputs and finds the recipes that use those ingredients. I have put my projects onto a github account which can be found at https://github.com/JoesThomas. I have made a website for a business as well which can be found at https://osteobeth.co.uk/. I found that doing these side projects allowed me to go over things that I may not have been sure about and gain more confidence in my coding and programming ability.
